Excellent Video by Stephen Schmidt, Chief Information Security Officer, Amazon Web Services

Must Watch for Certification to understand what process, policies, and controls amazon has in place to protect the cloud infrastructure and customers.

AWS has a shared security model where AWS is responsible for the security "OF" the cloud and customers are responsible for the security "IN" the cloud.

AWS Certification Exam Blueprint requires you to be familiar with the following security and risk related white papers available at: aws.amazon.com/whitepapers/

- Amazon Web Services: Overview of Security Processes
- Amazon Web Services: Risk and Compliance

The above video is excellent insight into the very topics that these two whitepapers discuss.
